

Cubism is an artistic movement that consists in the decomposition of reality in geometric forms and in the use of a multiple perspective.

Based on this, we will make a cubist self-portrait as follows:

1. First of all you will take at least 5 pictures of the eyes, nose, mouth, you can add the ears, chin, etc, in different positions, front or profile.
2. Then you are going to draw a front eye looking at the photos, another profile, the profile nose, the front mouth, etc.
3. Finally you underline with a black marker and color it with temperas.
